

# JESSICA EN SHIUAN LEU

(+1)510-316-5172  $\diamond$  jess.leu24@berkeley.edu

website: [jessicaleu24.github.io/Home.html](http://jessicaleu24.github.io/Home.html)

## EDUCATION

---

**University of California, Berkeley**

Ph.D. program, Mechanical Engineering

*Aug. 2017 - Present*

*(Expected May 2022)*

– Major: Control (GPA : 3.93/4.0)

– Minor: Optimization, Design

**National Taiwan University (NTU), Taipei, Taiwan**

Bachelor of Science, Mechanical Engineering

*Sep. 2013 - Jun. 2017*

School Year cumulative ranking in class: 1<sup>st</sup>/205 (GPA : 4.22/4.3)

## RESEARCH INTERESTS

---

Robotics, human robot interactions, control and motion planning, optimization and optimal control, exoskeleton and mechanical design.

## SELECTED RESEARCH PROJECTS

---

**University of California, Berkeley**

*Graduate Student Researcher*

Berkeley, CA

*Aug. 2017 - Present*

– **Motion Planning for Robots in Uncertain Environments**

*Aug. 2018 - Present*

This research aims to utilize sensor signals to adapt the environment model when exploring uncertainties in the environment and take advantage of the agility of the mobile manipulator to conduct efficient motion planning.

A hierarchical receding horizon control algorithm (HRHC) is proposed to assure safety and efficiency in robots surrounded by time-varying environments.

A probabilistic model is used to capture the environmental uncertainties and motion planning is performed using Model Predictive Control (MPC).

– **Analysis of Motion Planning Algorithms**

*Aug. 2017 - Present*

– **Comparison and Combination of Motion Planning Algorithms**

*Aug. 2019 - Present*

This work presents a benchmark which implements and compares existing planning algorithms on a variety of problems. We also propose a hybrid planning algorithm, RRT\*-CFS, that combines the merits of sampling-based and optimization-based methods.

– **Motion Planning Stability in Time-varying Environments**

*Aug. 2017 - Oct. 2019*

This work considers planning problems in time-varying environments using the framework of MPC. Necessary conditions of closed-loop stability in the sense of Lyapunov are identified.

– **Mitten Prosthesis for Spinal Cord Injury (SCI) Subjects**

*Aug. 2018 - Oct. 2019*

A novel orthotic is designed to improve hand functionality while facilitating independent daily use for individuals with cervical SCI: the Single-size Semi-soft Assistive Mitten (SSAM). This device utilizes a slim dorsal leaf spring and underactuated cable drive to passively open and actively close the hand, in a way that is robust to variations in hand size. This mitten is intended to improve ease of donning and doffing, as the device is attached to all fingers at once.

- **Walking Strategy for Biped Robots with Artificial Muscles** *Sep. 2015 - Jun. 2017*  
In this project, a biped robot is designed and modeled. A PID and feed-forward combined controller is used to control the robot gait cycle. Pressure sensors are used to detect the connect surface profile and improve the compatibility of the biped.
- **Pneumatic tube Capsule Opening Device in Hospitals** *Jan. 2017 - Jun. 2017*  
To protect clinical scientists from occupational injuries, an automatic capsule opening device is designed, built, and installed in a hospital medical laboratory. This device locates the capsule, rotates the capsule to the right angle, opens it, and notifies the scientists.

## TECHNICAL STRENGTHS

---

<b>Programming</b>	Matlab, C++ , Python
<b>Software &amp; Tools</b>	Linux, ROS, LabVIEW, Latex
<b>Modeling and Analysis</b>	SolidWorks, AutoCAD, COMSOL
<b>Language skills</b>	Mandarin Chinese (native), English, Japanese

## EXTRA-CIRRUCULAR

---

<b>Student Athlete, UC, Berkeley women’s table tennis team</b>	<i>Sep. 2018 – Present</i>
<b>Student Volunteer, NTU International Affairs</b>	<i>Sep. 2014 – Jun. 2017</i>
<b>Department women’s basketball team (captain, 2015-2016)</b>	<i>Sep. 2014 – Jun. 2017</i>
